

iSystem

FS1010 - USB Phone

The iSystem USB Phone is a physical device that integrates seamlessly with the iSystem soft phone to offer the convenience and feel of a handset through a computer. The USB phone features a graphic LCD, back light and plugs directly into the computer's USB port for power. The handset rings for all incoming calls and can be used like a regular phone. The USB phone is a sleek substitute for standard headsets.

iSystem

FS1010 - USB Phone
