Access Management System

In view of the prevailing security conditions the world-over and the need to monitor and record the movements of employees, associates and visitors providing/restricting access to authorised personnel has assumed significant importance. Ensuring that visitors are allowed to access only to the locations specified and meet only the persons authorised plays an important part in maintaining and managing the security of property and data within the organisation.

Access Control Solutions are custom developed and deployed in order to address the specific needs of organisations. Customers can also integrate attendance management along with the access control solutions. Automating time and attendance recording and integrating to payroll can significantly help reduce the cost of managing payroll processing.

PERI iGuard provides a 3-in-1 solution combining an Access Control System, attendance Management system and a Visitor Management Solution.

Access Control Solution consists of the following components:

- Access Control Panel
- Access Communication Software & Control Database
- Proximity Card and Reader
- Door Module
- Magnetic door contact for door status
- Electromagnetic door lock
